PROFESSIONAL SUMMARY

Full-Stack JavaScript Developer specialized in LLM integration and AI agent development. Experience designing MCP servers, multi-tenant platforms and scalable microservices with React, Node.js and TypeScript, with additional background in Web3 and smart contracts.

WORK EXPERIENCE

Full Stack Developer | T.I.S. Consultoría de IA | Aug 2025 – Present

- Built a multi-tenant AI-powered contact center platform (MarIA) using microservices architecture (Node.js, TypeScript, Docker, PostgreSQL).
- Developed a real-time voice AI pipeline (Node.js, Express, Prisma) processing inbound calls through STT → LLM → TTS with telephony integration.
- Implemented an MCP server (Fastify, HTTP+SSE) integrating CRM/ERP data to enable AI agents to query tenant-specific knowledge bases in real time.
- Designed a credit-based billing system (Next.js, React, TypeScript) with multi-tenant isolation, per-tenant API keys and JWT-authenticated REST API.
- Designed and maintained CI/CD pipelines (GitHub Actions, Docker, GHCR) across multiple microservices, including parallel test suites, automated versioning, and scheduled deployments to VM via SSH.
- Implemented monitoring and observability (Grafana, Prometheus) for real-time metrics of the microservices in production.

Full Stack Developer (Freelance) | Liga TGM | Aug 2025 – Sep 2025

- Migrated the full platform from Vue.js to Next.js (TypeScript) achieving feature parity and improving performance via React Server Components.
- Built a dual competition system (Firebase Firestore) supporting leagues (round-robin with live standings) and tournaments (automatic and manual bracket generation).
- Implemented role-based authentication (Firebase Auth) including admin panel, user management, and ban/session handling.

Full Stack Developer | Catapulta | Jan 2025 – Aug 2025

- Developed a Ponder-based system (TypeScript, Node.js, PostgreSQL) to index and process smart contract events (Ethereum, Polygon) in real time.
- Designed an MCP for CLI that allows using the CLI through natural language, translating requests into executable commands without requiring syntax knowledge.
- Implemented custom CLI commands to optimize contract deployment and verification using Foundry, including automatic validations.
- Developed a hybrid payment platform integrating Stripe and cryptocurrency payments via smart contracts (Next.js, Node.js).

Full Stack Developer | Adopta un Valenciano | Oct 2024 – Jan 2025

- Built full-stack features for an open-source emergency platform connecting people offering and requesting help after the DANA disaster in Valencia.
- Implemented authentication middleware, route controllers and data schemas (Node.js, MongoDB, React).
- Integrated Leaflet with GeoIP to display real-time locations based on help type and user location.

Back End Developer | Adopta un Junior | Sep 2024 – Nov 2024

- Developed a REST API (Node.js) for a podcast PWA (Web Reactiva), consuming an RSS feed, managing user data and tracking listening progress.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React, Next.js, Astro, Tailwind CSS, HTML5, CSS

Backend: Node.js, Express, Fastify, REST APIs

AI & LLMs: MCP (Model Context Protocol), LLM integration, AI agents

Databases: PostgreSQL, MongoDB, Firebase Firestore, Supabase

DevOps & Tools: Docker, CI/CD, GitHub Actions, Grafana, Prometheus, Prisma, Zod, Stripe, Git

Web3: Foundry, Hardhat, smart contracts

EDUCATION

Full Stack Web Development Bootcamp | [The Bridge | Digital Talent Accelerator](#) | Sep 2023 – Apr 2024

LANGUAGES

Spanish — Native **English** — C1
